Welcome to the world of
endless possibilities

The SKINROCK® Product

SKINROCK® a natural stone. Incredibly thin. Incredibly light.

SKINROCK® AG will offer customers an innovative product for the building industry. It is a natural stone designed to stand out as a unique product which opens up new, unlimited opportunities to apply on almost all surfaces.

SKINROCK® is available in over 17 different decors, in natural slate and quartzite, elegant silver tones to green, grey and black shades.

The product is created and developed in Switzerland. We offer a technologically advanced product line with SKINROCK®, SKINROCK®-Plus, SKINROCK®-Static, SKINROCK®-Art and SKINROCK®-Additives. The customers have the option of purchasing all additives from one supplier for exceptional customer services.

By creating a one-of-a-kind product, SKINROCK® AG plans to attract the entire building industry worldwide.

**NATURAL STONE.
INCREDIBLY THIN.
INCREDIBLY LIGHT.**

SKINROCK® is a wall and floor cover made of real natural stone.

Since its invention SKINROCK® has been an inspiration in the wall and floor cladding business globally. The ease of application, the choice of extra ordinary colours and above all the resilient durability has made the product an instant success in architect circles.

The technological advancement of literally peeling the skin of the natural rock and producing it commercially has given the edge to this product comprehensively.

Stone is drawn onto a solid carrier film in thin layers. Even larger stone veneers in the sizes 60 x 120 cm and 120 x 250 centimeters are extremely lightweight and can be installed on almost any surface. This opens up new, unlimited opportunities to create the ambience of natural stone on drywall, wood, metal, fiberglass, ceramic and concrete.

SKINROCK® is suitable for all interior and exterior walls and floors. The lightweight and yet stable veneers can be installed quickly and easily by a specialist. After an initial impregnation the natural stone can be cleaned and maintained in a single pass.

PRODUCT LINE

The company is currently selling five product lines including all necessary additives for a one-stop service.

SKINROCK®-BASIS

The product is suitable for all internal and external walls.

SKINROCK®-BASIS PLUS

SKINROCK®-Plus is the advanced product line which is ideal for internal flooring.

SKINROCK®-TRANSLUCENT

Laid with special glue and can be backlit.

SKINROCK®-STATIC

With our new developed facade system SKINROCK®-Static we open up new possibilities for facade constructions.

SKINROCK®-ART

The flexibility, lightness and possibility to backlit SKINROCK® create new opportunities and range of application.

SKINROCK®-ADDITIVES

To provide our customers with the most valuable service we have created and developed all necessary additives for the application of SKINROCK® including SKINROCK®-Care, SKINROCK®-Protect, SKINROCK®-Cleaner, SKINROCK®-Cleaner Strong and SKINROCK®-Grout.

ECO - GREEN

Conserves resources, thickness only 1.5 – 3 mm,
conventional tiles are typically 10 mm.

SAVING NATURAL RESOURCES

SKINROCK® is 1.5 mm to maximum 3 mm thick, comparing it with granite and other natural stones which carry a thickness of minimum 10 mm.

Due to this distinct quality of SKINROCK® hundreds of meters can be produced while conserving natural resources.

TRANSLUCENT

The extraordinary feature of SKINROCK® is its translucence ability, offering a versatile range of backlit products to enhance any interior or design project.

FLEXIBLE

Our product offers architects and designers new possibilities with positive and negative roundings.

LIGHTWEIGHT

The lightweight of approximately 2.8 kg/m^2 offers huge static benefits and the ecological sustainability starts with the transportation.

SKINROCK PROJECT GALLERY

SHINING HILL

A close-up view of a wall covered in a wallpaper with a dark, vertical, wood-grain-like texture. Several clear glass tumblers are placed on a surface in the foreground, partially obscuring the wall.

JUNGLE FIRE

A close-up view of a wall with a wallpaper featuring a mottled, earthy pattern in shades of green, blue, and brown. A dark metal shelf is mounted on the wall, holding a folded magenta fabric item and a piece of straw or raffia material.

MOTHER EARTH

A large, curved wall covered in a wallpaper with a complex, organic pattern in shades of brown, grey, and yellow. The wall is part of a room with a wooden floor and a curved wooden ceiling.

TECHNICAL SPECIFICATIONS

Weight per m²:

Natural stone 1.50 kg

Polyester / Resin 0.80 kg

Fiberglass 0.50 kg

Total weight: approx. 2.80 kg/m²

Material thickness in mm:

Natural stone surface approx. 0.5 to 1.0 mm

Fiberglass approx. 1.0 mm

Total material thickness: 1.5 to 3.0 mm

Formats: 60x120 cm and 120x250 cm

Oversize on request

Working temperature:

Processing temperature between

10° and 35° C are recommended.

Test results:

- Conformance Certificate
(TVU Quality Service, Gujarat/July 2014)
CE-No. TVU/CPR/2014/101
- Fire prevention test as provided for in DIN 4102 part 1
(DMT GmbH & Co. KG, Dortmund/January 2014)
Requirements for B2 construction material category are met
- High resistance to frost/salts formed as a result of thawing in accordance with standard SIA 262/1:2013 (Technotest AG, Rüschlikon/May 2014)
- Measured quantity of peeling material equals to 20 or 30g in both Skinrock tiles and is negligible.
- No notable changes in the surface were found on both tested specimens after their freezing and thawing with formation of salts
- Water steam diffusion according to SN EN 1931 (Technotest AG, Rüschlikon/May2014)
